First Quarter 2022 CUNA Economics & Statistics

First Quarter 2022

More Bad News

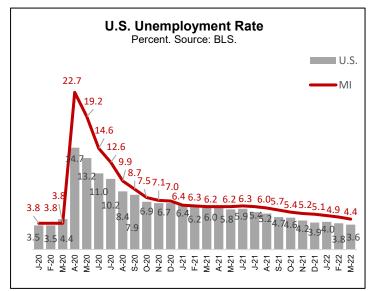

Continued rapid transmission of the COVID Omicron variant combined with Russia's invasion of Ukraine battered supply chains and disrupted important segments of the labor market in the first quarter of 2022.

Gross Domestic Product (GDP), which measures the value of all goods and services produced in the U.S., declined at a 1.6% inflation-adjusted annualized rate in the first quarter – down from the fourth quarter 2021's 6.9% increase.

The headline unemployment rate fell three tenths of a percentage point – from 3.9% at the start of the quarter to 3.6% by the end of March. The first quarter-end reading came in 2.4 percentage points lower than the first quarter 2021 level.

Non-farm employment rose by 1.6 million in the first quarter and by 6.4 million during the 12-months ending March 2022. Still, March 2022 total employment was 1.7 million lower than prepandemic levels.

Michigan's unemployment rate finished the first quarter at 4.4% – below the 4.6% national average rate and seven tenths of a percentage point lower than the level reported in the state at the beginning of the quarter. The state's unemployment rate is one and eight tenths of a point lower than its year-ago reading and six tenths of a point higher than the pre-pandemic level. U.S. Cumulative Total COVID-19 Cases Millions. Source: Johns Hopkins University 79. 9.9 26.2 28.7 30.5 32.4 33.3 33.7 35.0 - 6I N-20 D-20 M-21 A-21 M-21 **₽-**21 S-21 0-21 5 ų į 5 -21

Overall non-farm employment in the state stood at 4.33 million at the end of March 2022 – a three month gain of 38,000. Total non-farm employment increased 171,000 over the year ending March 2022 but is 126,000 lower than the pre-pandemic level.

Inflation, measured by the Consumer Price Index, accelerated during the quarter from a 0.6% increase in January to 0.8% in February and 1.2% in March. Prices rose 8.6% in the year ending March - the fastest 12-month increase since January 1982.

As expected, the Federal Reserve increased the federal funds rate target by 0.25% in response to those price pressures. The ten-year Treasury yield jumped 0.80% in the three-month period. Expect more aggressive Fed action (and resulting pressure on credit union net interest margins) if inflation pressures don't cool soon.

First Quarter 2022

Russia's decision to invade Ukraine rattled investors, driving the S&P 500 Index down 5% in the first quarter. Twelve-month appreciation remained solid, reflected in a 14% increase. The broad equity index finished up 53% compared to its pre-Covid crisis reading of 2,954 at the end of February 2020.

On the housing front, overall market activity was mixed. New home sales, which accounted for roughly 11% of total sales - were up 10.9% compared to fourth quarter 2021 levels but were down 9% compared to the first quarter of 2021. Existing home sales were down 2% in the quarter. The FHFA all-transaction home price index rose at a 14.4% annualized rate in the quarter. The price index stood 19.4% higher than its first-quarter 2021 reading and it is 29.8% higher than pre-pandemic readings.

The FHFA's all-transactions house price index for Michigan increased at an annualized 10.5% rate in the first quarter. Home prices in the state are up 16.4% in the year ending March 2022 and by 26.4% since the beginning of the pre-pandemic level.

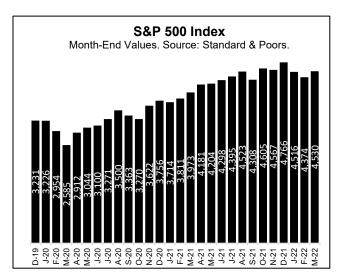

Credit union financial results continued to reflect strong earnings, solid membership gains, fast loan growth, and relatively slow savings growth during the first quarter.

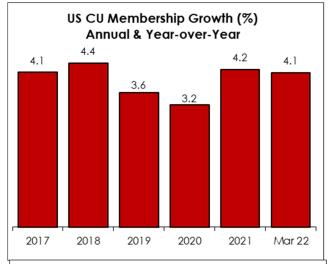

Asset quality – measured by both loan delinquency rates, and net charge-off rates remained near record high levels: Both loan delinquency and net charge-off rates remain near historic lows. The growth rate in credit union loans outpaced the growth rate in savings balances for the fourth consecutive quarter. However, credit unions remain flush with liquidity. The movement's net worth ratio held steady i the three-month period.

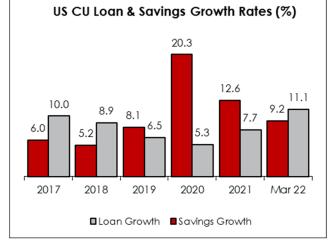

Michigan credit union results again generally mirrored these national trends.

Memberships increased by 1.1% (i.e., 4.4% annualized) in the three months ending March and by 4.1% year-overyear. The Bureau of Economic Analysis estimates U.S. population grew by 0.2% in the quarter.

Changes in credit union loan balances typically reflect first quarter weakness as members concentrate on paying down holiday loans. First quarter 2022 however was a different story.

Credit union loans increased 3.7% - a historically very strong14.8% annualized pace during the period. The three-month showing was a full percentage point higher than the 2.7% fourth-quarter result. Commercial loans once again led the way, expanding at a 4.7% rate (18.8% annualized). Used autos were up 4% (16% annualized) and personal unsecured loans increased 2.7% 10.8% annualized. Our report shows mortgages declined significantly – but this is due to changes in the call report which introduces a break in the series as previously reported.

As is typically the case in the first quarter, savings balances increased at strong pace. Overall, credit union savings balances jumped 3.5% in the quarter (a 14% annualized advance.)

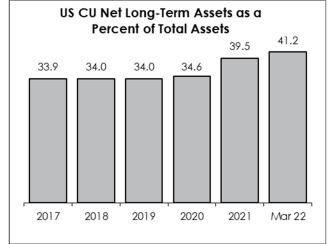

Consumers continue to keep funds short and liquid. Share drafts were up at a 5.7% unannualized rate in the quarter, while regular shares were up 4.6% and money market shares increased 3.9%. IRA account balances increased by only 0.2% and certificate balances were down 2.5% in the three-month period.

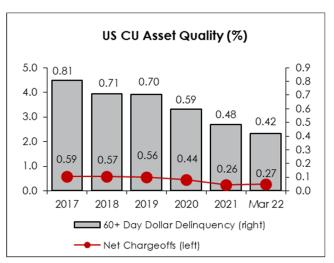

With loan growth outpacing savings growth marginally, the movement's loan-to-savings ratio increased from

70.1% to 70.2% in the quarter. The current reading remains well below the pre-pandemic level of 84%.

Asset quality remained high – with both delinquency and net-chargeoff rates holding near all-time lows. The delinquency rate declined, from 0.49% in the fourth quarter to 0.42% at the end of March 2022. Net charge off rates inched up from an annualized 0.26% in the fourth quarter to 0.28% in the year's first three months.

Credit union interest rate risk exposure continued to increase in the first quarter credit unions collectively retained longer-term mortgages (selling fewer into the secondary market). Net long-term assets started the year at 39.5% of assets but that exposure jumped to 41.2% of total assets by the end of March. The addition of "S" (Sensitivity) to the CAMEL rating system suggests supervisory authorities will be looking very closely at these developments and are likely to be scrutinizing credit unions that reflect large increases in this exposure. In this context, good documentation and solid, defensible modeling will continue to be critically important.

Credit union earnings continued to soften, with a first-quarter 2022 annualized average bottom-line ROA of 0.85%. That's a solid reading but lower than both the 0.91% total in the fourth quarter and the 1.07% total in full-year 2021. Net interest margins held steady (a five-basis point quarterly

decline in asset yields was offset by an identical decline in funding costs). The operating expense ratio declined by fourteen basis points, but loss provisions increased by nine basis points and fee and other income fell by eighteen basis points.

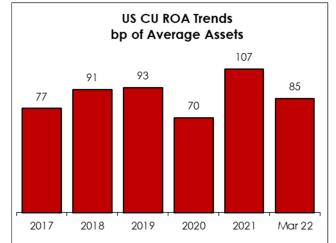

Average ROA ranges from a low of 17 basis points within the \$20 million or less asset category to a high of 92 basis points in the \$1 billion or more asset category. Overall, 42% of those in the smallest asset category operated in the red during the quarter, while only 0.6% of those in the largest category experienced that challenge. (Note credit unions with \$50 million or less in total assets account for half of all credit unions operating at the end of the quarter. Breakdowns by asset-size category are shown in the accompanying graphic.

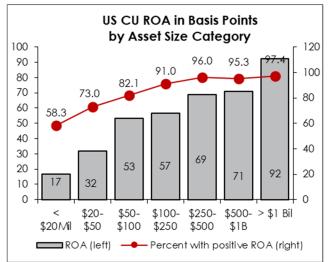

Smaller shops DID, once again, see earnings results improve during the quarter and we expect further improvements on the horizon – due to expectations of stronger demand in the auto and unsecured lending arena. In contrast, larger shops will likely continue to report marginally lower earnings results mostly due to fewer gains on mortgage sales and higher loss provisions.

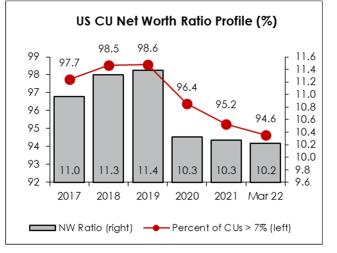

The movement's net worth ratio held steady at a level just above 10%. Overall, 94.6% of credit unions remain well capitalized with net worth ratios over 7% at the end of the first quarter.

It should be noted that although small credit unions generally report relatively low earnings, they also report very high capital positions. For example, the nearly 1,600 credit union with \$20 million or less in assets reflect an average net worth ratio equal to 14.0% of total assets.

Credit unions started 2022 in generally good financial shape and nearly all should have the resources to continue to serve in meaningful ways as millions of members struggle to make it through personal financial challenges related to high inflation and the potential for a significant economic slowdown.

Higher market interest rates will reduce loan demand but if history is a good guide those increases should continue to compel a "get-while-the-gettin's-good" mentality with those who have been sitting on the sidelines pivoting to financing big-ticket purchases in recognition that borrowing costs are only going to become more expensive the longer they wait.

Looking forward, CUNA economists expect slower economic growth as the Federal Reserve continues to aggressively combat strong inflation pressures. This will undoubtedly challenge credit union members – and those challenges are likely to be obvious in credit union operating results.

Currently, our baseline economic forecast can be summarized as follows:

Economic Growth. After falling at an annual rate of 1.6% in the first quarter, GDP may decline again in the second quarter. However, this weakness is due to changes in inventories and a rise in net imports. Consumer demand remains strong. According to a popular notion of a recession as two consecutive quarters of negative GDP growth, the media will refer to this as a recession. However, the National Bureau of Economic Research's official definition requires a <u>significant</u>, <u>widespread</u> and <u>persistent</u> decline in economic activity, defined by a number of economic variables including consumer spending and the level of employment. With the current strength in the labor market, we expect GDP growth to rebound in the second half, but a more significant slowdown, or even a recession is quite possible next year if the Fed's tightening overshoots.

Inflation. Inflation continues to defy expectations that it will moderate. The current bout of inflation is more "cost push" (supply shocks) than the traditional "demand pull" (overly stimulative fiscal and/or monetary policy). A variety of supply shocks began with COVID, and new ones emerged with the war in Ukraine. The effects of COVID are receding, but the war rages on. The two major fiscal stimulus packages enacted during COVID occurred when the economy was very weak and thus were not likely inflationary (although the early 2021 package was perhaps a bit over sized). Likewise, while the economy was operating well below capacity, low interest rates and quantitative easing were not inflationary. However, accommodative monetary policy in the second half of last year and the first few months of this year, as the economy was strengthening, has exacerbated inflation. We remain convinced that inflation will moderate over the coming months so long as COVID continues to fade. In addition, monetary policy is transitioning from being very to only slightly accommodative and will soon be quite restrictive.

Unemployment. The labor market remains very strong. Even as GDP appeared to stagnate over the first half of the year, the economy added an average of 450,000 jobs a month. That's well over twice the average monthly job gain during the long expansion following the Great Recession. Although job growth will slow, we expect the unemployment rate to remain around 3.6% for the rest of the year before rising next year.

Interest Rates. So far, the Fed has stuck to the policy Chair Powell recently announced of being serious about choking off inflation by aggressively increasing interest rates. The likely 150 basis point increase in the Fed Funds target range over just two FOMC meetings is a far cry from the more traditional 25 bp per meeting increases that we've seen in previous tightening episodes. Given our forecast that inflation will only slow to 7% by yearend, the Fed will continue to tighten, and the Funds rate will be over 3% by December. Given the high probability of a growth slowdown next

year, we do not expect longer term interest rates to rise nearly as much as short-term rates do. As a result, the yield curve is likely to remain flat, or even negative over the rest of 2022.

What will this mean for credit union operations?

Savings (Deposit) and Asset Growth. Credit union members have been on a spending spree so far in 2022. Savings growth in the first five months of the year is the weakest it's been in five years, at only 3%. Since the bulk of savings growth usually occurs in the first half of the year, we project full year 2022 growth at only 5%, down from over 12% last year, and an average of 8% over the preceding decade. Although consumer spending may slow in the second half, competition from money market mutual funds may cause disintermediation. As asset growth is largely determined by savings growth, expect total credit union assets to grow by 4% this year and 5% next year.

Loan Growth. Credit union lending has been on a tear so far this year, rising by 8.1% (not annualized) through May. That's the strongest percentage increase in loans outstanding in the first five months of a year going back at least to 1993. It's almost double the previous high for the period of 4.2% in 2000. This is likely due a surge in pent up consumer demand as the effects of COVID are reduced, coupled with the higher prices of products members are financing. Slowing prepayments on some loan categories due to higher interest rates are likely also playing a role. Expect full year loan growth in 2022 to be 12%, up from 7.7% last year.

Liquidity. With loan and savings growth moving in opposite directions, the average credit union loan-to-savings ratio will rise to 74.7% by December. That's a sharp increase from its 70.7% level at the beginning of the year, but it is still below the 77% average of the previous decade. The increase in the loan to savings ratio will slow next year as we expect loan growth to slow and savings growth to accelerate slightly.

Asset Quality. So far in 2022, the average credit union delinquency rate has continued to decline, falling from a then-record low of 0.48% last December to a new record of 0.42% as of March and May. These incredibly low readings are likely the result of very low unemployment and the fact that many members' balance sheets improved substantially (unexpected savings accumulation and reduced borrowing for big ticket durables) as a result of COVID. Look for a gradual return to a more normal delinquency rate by the end of next year as the economy slows.

Earnings. After last year's strong 1.07% return on assets (ROA), the first quarter came in lower at 87 basis points. We expect the net income ratio to fall further this year to 70 bp for the full year, and the same next year. Credit union loan loss allowance accounts are finally back to their long-run average of between 80 and 90 basis points, so provision expenses will resume at a modest rate. Interest rate increases would normally boost credit union earnings, but the flattening and inversion of the yield curve may increase deposit costs more than loan yields, especially for those credit unions faced with disintermediation. Strong household spending will support interchange income, at least for the next several months, but with 30-year mortgage rates over 5%, income from mortgage refinancing will fall sharply this year compared to last year.

Michigan CU Profile - Quarterly Trends

Earnings & net chargeoffs are annualized quarterly results not seasonally adjusted. Growth rates are not annualized. Delinquency rates are 60+ day dollar delinquencies. Net chargeoffs are dollar chargeoffs net of recoveries. Totals include only credit unions that are released on the NCUA 5300 Call Report file.

*Prior to third quarter 2017, these were reported as member business loans. This change may cause fluctuations from prior cycles.

**Prior to 2022, First mortgage and HEL & 2nd Mtg included commercial real estate loans. This will cause fluctuations from prior cycles. Source: NCUA and CUNA E&S.
